## Research, Research Papers and Plagiarism

### Abstract of the Program

As human beings we always ask ourselves question about a phenomenon we observe in our daily lives. Applying curiosity and intuition in a systematic approach and finding answers to these questions is said to be “research”. The advancement of science and technology is not possible without high quality ground breaking research. There are several important technological areas in the country such as energy, water and medicine which require urgent solutions. Therefore, it is important to train the young minds of the country in a systematic way such that they are attracted towards pursuing research as their career. In this presentation, the speakers will speak on the basics of research, the need of research, the dissemination of research work via research papers and on the ethics in research (plagiarism). The lecture is meant for the young engineering students such that they can have a clear understanding of research, research papers and ethical aspects of research.
